

Telecommunications Installations

Our contractors are duly licensed to install **telecommunications systems**. During the installation process, they will comply with all **valid regulations** and **carry out the installation as indicated in the project specifications** designed by the responsible engineer or technician. Our staff and contractors will at all times comply with relevant regulations on health and safety.

In all cases, **licensed telecommunications specialists will be responsible for carrying out the installations**. Finally, to meet all legal requirements, every installation will be duly certified and documented accordingly by means of a **technical report**.

. Upon request, we also take care of all **legalisation procedures** that need to be carried out through the **Telecommunications Headquarters**.

Our **licensed telecommunications contractors** have ample experience with the following types of telecommunications installations:

- Telecommunications systems for residential buildings.
- Telecommunications systems for businesses and offices.
- TV installations.

- Data communication networks and verification/certification of communication stations.
- Intercom and video surveillance installations.
- Etc.
