

Fire Safety

Our contractors are duly licensed to install **fire safety systems**. During the installation process, they will comply with all **valid regulations**

and

carry out the installation as indicated in the project specifications

designed by the responsible engineer or technician. Our staff and contractors will at all times comply with relevant regulations on health and safety.

In all cases, **licensed fire safety specialists will be responsible for carrying out the installations**. Finally, to meet all legal requirements, every installation will be duly certified and documented accordingly by means of a **technical report**. Upon request, we also take care of all **legalisation procedures** that need to be carried out through the **Ministry of Industry**.

Our **licensed fire safety contractors** have ample experience with the following types of fire safety systems:

- Fire safety installations with automatic detection systems (analogous or conventional).
- Automatic carbon monoxide detection.
- Operation of ventilation systems.

- Fully equipped fireplug networks (type BIE-25 and BIE-45).

- Concealed and visible hydrant networks.
- Wet and dry sprinkler systems and control panels.
- Dry column installations (types IPF-39, IPF-40 e IPF-41).
- High-pressure systems.
- Gaseous extinguishing systems (fire extinguishers).
- Supply and installation, maintenance and revision.
- Emergency plans.
